

**PRESS RELEASE**

**QuadGen and SpiderCloud Sign Partnership Agreement to Support Explosive Small Cell Growth**

**Companies Join Forces to Offer High-Quality Small Cell Services to Mobile Operators and Diverse Enterprises, Including Retail and Large Public Venues**

**King of Prussia, PA, May 23, 2017** - **QuadGen**, a global network solutions company, today announces that it has signed a Partnership Agreement with **SpiderCloud Wireless**, a leader in scalable small cell systems, to offer end-to-end small cell RF design, installation, integration and optimization services to enterprises of all sizes, from small retail stores to very large public venues.

QuadGen Wireless has been providing small cell services to carriers, large venues and enterprises for nearly half a decade. QuadGen also has more than 10 years of experience providing wireless, transport and IP core services to telecommunications companies, and customers in the U.S. and internationally. To date, QuadGen has deployed hundreds of small cell projects in addition to its experience in delivering other sophisticated network solutions.

"SpiderCloud has been on the forefront of small cell technology and has an amazing track record of innovation and quality," states Lettison Carroll, President QuadGen. "The partnership between QuadGen and SpiderCloud brings together two strong companies in the fast-growing small cell market. Anyone two leading technology firms come together in such a positive way, it's a great thing for customers."

QuadGen has also revolutionized small cell deployments by creating a 24/7/365 Small Cell Support Center. This center was launched two years ago to support a large national wireless company and is designed to support any installation by solving complex deployment issues, from transport engineering and troubleshooting to wireless integration. As it has matured, the Small Cell Support Center has solved issues on behalf of both customers and systems integrators on large nationwide programs.

"QuadGen has rapidly proven its ability to deliver the end-to-end services required to deploy a SpiderCloud small cell system," comments Amit Jain, VP of Product Management and Marketing, SpiderCloud. "SpiderCloud is excited to partner with QuadGen to offer high-quality small cell solutions to mobile operators and enterprises."
